

Prestige Care, Inc.
Prestige Senior Living, L.L.C.

Levels of Care:

Independent Living

Assisted Living

Memory Care

POST-ACUTE REHABILITATION

Hear it from those who know best...

Every complication I faced was met with highly specialized care. The type of care that allows dreams to come true, even when the statistics say otherwise. Sullivan Park Care Center has a different attitude from the moment you arrive.

from Prestige Post-Acute and Rehab Center - Centralia

Who is Post-Acute Rehabilitation best suited for?

- Those recovering from surgery or hospital stays needing full-time care while they heal.
- Rehabilitation is a short-term care center, as opposed to a long-term independent, assisted or memory care community.

Benefits of Rehabilitation and Post-Acute Care

EASES TRANSITIONS: The number one goal of a rehabilitation center is to help patients heal quickly and properly, so that they can return to an active, healthy life. While recovering after a hospital stay, our staff provides the tools patients need to get back on their feet. Physical therapy, medication management, and regular physical evaluations are just a few of the steps taken to ensure patients recover as easily as possible.

ON-SITE SERVICES: Patients in rehabilitation centers have access to many amenities. They have transportation services, cleaning and laundry, meal service and more.

24/7 STAFF: If any assistance is required at any time, rehabilitation centers have caretaking staff working around the clock. No matter the time and issue, patients are always able to have access to caretakers and nurses to help them stay happy and healthy.

NEXT STEP PLANNING: We want patients to have the best care, even after they leave our center. Rehabilitation centers offer outpatient services to help patients recover and prevent future injuries. Many centers are also connected with senior living communities and can easily transfer any important chart information to staff there so they can continue to give patients the best care.
